一、文章中英文主旨

中文主旨

本文围绕全球热议的**数字鸿沟**展开，指出“信息贫富分化”的鸿沟确实真实存在，但如今已有全新的积极力量正在消解这一鸿沟；互联网的商业化普及、商业利益驱动与各国政府的推动，将让数字鸿沟持续缩小，而互联网也正是人类对抗全球贫困最有力的工具之一；同时文章提出，贫困国家若想充分发挥互联网的价值，必须摒弃对外国投资的过时偏见，借助外资建设电子基础设施，同时守住对企业的管控底线。

英文主旨

This article focuses on the globally heated topic of the **digital divide**. It points out that the divide between the information-rich and the information-poor really exists, but new positive forces are now working against it. The commercial popularization of the Internet, driven by business interests and governments' initiatives, will keep narrowing the digital divide, and the Internet is one of the most powerful tools for human beings to fight global poverty. Meanwhile, the article suggests that impoverished countries must abandon outdated prejudices against foreign investment if they want to give full play to the value of the Internet. They should utilize foreign capital to build electronic infrastructure, while holding the bottom line of supervision over foreign corporations.

三、完整原文

A great deal of attention is being paid today to the so-called digital divide — the division of the world into the info (information) rich and the info poor. And that divide does exist today. My wife and I lectured about this looming danger twenty years ago. What was less visible then, however, were the new, positive forces that work against the digital divide. There are reasons to be optimistic.

There are technological reasons to hope the digital divide will narrow. As the Internet becomes more and more commercialized, it is in the interest of business to universalize access — after all, the more people online, the more potential customers there are. More and more governments, afraid their countries will be left behind, want to spread Internet access. Within the next decade or two, one to two billion people on the planet will be netted together. As a result, I now believe the digital divide will narrow rather than widen in the years ahead. And that is very good news because the Internet may well be the most powerful tool for combating world poverty that we've ever had.

Of course, the use of the Internet isn't the only way to defeat poverty. And the Internet is not the only tool we have. But it has enormous potential.

To take advantage of this tool, some impoverished countries will have to get over their outdated anti-colonial prejudices with respect to foreign investment. Countries that still think foreign investment is an invasion of their sovereignty might well study the history of infrastructure (the basic structural foundations of a society) in the United States. When the United States built its industrial infrastructure, it didn't have the capital to do so. And that is why America's Second Wave infrastructure—including roads, harbors, highways, ports and so on—were built with foreign investment. The English, the Germans, the Dutch and the French were investing in Britain's former colony. They financed them. Immigrant Americans built them. Guess who owns them now? The Americans. I believe the same thing would be true in places like Brazil or anywhere else for that matter. The more foreign capital you have helping you build your Third Wave infrastructure,

which today is an electronic infrastructure, the better off you're going to be. That doesn't mean lying down and becoming fooled, or letting foreign corporations run uncontrolled. But it does mean recognizing how important they can be in building the energy and telecom infrastructures needed to take full advantage of the Internet.
