一、文章中英文主旨

中文主旨

本文探讨了21世纪初原油价格大幅上涨是否会像20世纪70年代两次石油危机那样引发全球经济衰退。通过分析原油成本在终端油价中占比下降、发达国家对石油依赖度显著降低以及此次油价上涨未伴随大宗商品普遍通胀等核心原因，得出**此次油价上涨的经济影响远不如过去严重**的结论，同时指出石油进口型新兴经济体可能受到更大冲击。

英文主旨

This article explores whether the sharp rise in crude oil prices in the early 21st century will trigger a global economic recession as the two oil crises in the 1970s did. By analyzing core reasons such as the declining share of crude oil costs in retail petrol prices, the significantly reduced dependence on oil in developed countries, and the absence of general commodity inflation accompanying this oil price hike, it concludes that the economic impact of this oil price increase is far less severe than in the past. It also points out that oil-importing emerging economies may suffer a greater impact.

- 翻译: 经济合作与发展组织(OECD)在其最新的《经济展望》中估计, 如果油价全年平均为每桶22美元(1998年为13美元), 这只会使富裕经济体的石油进口支出增加国内生产总值的0.25%至0.5%。

本段概括: 给出第三个核心理由: 此次油价上涨的宏观经济背景与70年代完全不同, 未伴随大宗商品普遍通胀和全球需求过剩, 世界经济才刚走出衰退, 因此不会引发连锁式的经济危机。

Text 3

Could the bad old days of economic decline be about to return? Since OPEC agreed to supply-cuts in March, the price of crude oil has jumped to almost *26 a barrel, up from less than 10* last December. This near-tripling of oil prices calls up scary memories of the 1973 oil shock, when prices quadrupled, and 1979-1980, when they also almost tripled. Both previous shocks resulted in double-digit inflation and global economic decline. So where are the headlines warning of gloom and doom this time?

The oil price was given another push up this week when Iraq suspended oil exports. Strengthening economic growth, at the same time as winter grips the northern hemisphere, could push the price higher still in the short term.

Yet there are good reasons to expect the economic consequences now to be less severe than in the 1970s. In most countries the cost of crude oil now accounts for a smaller share of the price of petrol than it did in the 1970s. In Europe, taxes account for up to four-fifths of the retail price, so even quite big changes in the price of crude have a more muted effect on pump prices than in the past.

Rich economies are also less dependent on oil than they were, and so less sensitive to swings in the oil price. Energy conservation, a shift to other fuels and a decline in the importance of heavy, energy-intensive industries have reduced oil consumption. Software, consultancy and mobile telephones use far less oil than steel or car production. For each dollar of GDP (in constant prices) rich economies now use nearly 50% less oil than in 1973. The OECD estimates in its latest Economic Outlook that, if oil prices averaged *22 a barrel for a full year, compared with 13* in 1998, this would increase the oil import bill in rich economies by only 0.25-0.5% of GDP. That is less than one-quarter of the income loss in 1974 or 1980. On the other hand, oil-importing emerging economies—to which heavy industry has shifted—have become more energy-intensive, and so could be more seriously squeezed.

One more reason not to lose sleep over the rise in oil prices is that, unlike the rises in the 1970s, it has not occurred against the background of general commodity-price inflation and global excess demand. A sizable portion of the world is only just emerging from economic decline. The Economist's commodity price index is broadly unchanging from a year ago. In 1973 commodity prices jumped by 70%, and in 1979 by almost 30%.

课文3

经济衰退的艰难旧时光是否即将重现？自从石油输出国组织（OPEC）在3月份同意削减石油供应以来，原油价格已从去年12月的不到10美元一桶飙升至近26美元一桶。油价近乎翻了三倍，这唤起了人们对1973年石油危机的可怕记忆——当时油价翻了四倍，以及1979至1980年的石油危机，那时油价也几乎翻了三倍。前两次石油危机都导致了两位数的通货膨胀和全球经济衰退。那么这次警告灾难将至的头条新闻在哪里呢？

本周伊拉克暂停石油出口，这进一步推高了油价。与此同时，北半球进入冬季，经济增长势头强劲，这可能会在短期内进一步推高油价。

然而，我们有充分的理由预期此次油价上涨带来的经济后果不会像20世纪70年代那样严重。与70年代相比，如今大多数国家的原油成本在汽油价格中所占的份额更小。在欧洲，税收占汽油零售价的比例高达五分之四，因此即使原油价格发生相当大的变化，对加油站油价的影响也比过去要小得多。

富裕经济体对石油的依赖程度也比过去降低了，因此对油价波动的敏感度也更低。能源节约、转向使用其他燃料以及高能耗重工业重要性的下降，都减少了石油消耗量。软件、咨询和移动电话行业的石油消耗量远低于钢铁或汽车制造业。如今，富裕经济体每创造一美元的国内生产总值（按不变价格计算），石油消耗量比1973年减少了近50%。经济合作与发展组织（OECD）在其最新的《经济展望》中估计，如果油价全年平均为每桶22美元（1998年为13美元），这只会使富裕经济体的石油进口支出增加国内生产总值的0.25%至0.5%。这还不到1974年或1980年

不必为油价上涨而失眠的另一个原因是，与70年代的油价上涨不同，此次上涨并非发生在大宗商品价格普遍上涨和全球需求过剩的背景下。世界上相当大一部分地区才刚刚走出经济衰退。《经济学人》的大宗商品价格指数与一年前相比基本没有变化。1973年大宗商品价格上涨了70%，1979年上涨了近30%。
