

2007 text2

一、文章中英文主旨

中文主旨

本文以智商纪录保持者玛莉莲·沃斯·莎凡的专栏为切入点，探讨了智商测试的本质、形式与局限性，指出智商分数不能完全定义人的智力，传统标准化测试无法全面评估与学业、人生成功相关的创造力、实践能力等核心要素，且测试结果的预测性会受人群、环境压力等因素的显著影响。

英文主旨

This article starts with the column of Marilyn vos Savant, the holder of the highest IQ record in history, discusses the nature, forms and limitations of IQ tests. It points out that IQ score cannot fully define human intelligence, traditional standardized tests cannot comprehensively evaluate core elements such as creativity and practical ability which are critical to academic and life success, and the predictability of test results is significantly affected by factors like test population and environmental stress.

二、逐句精读解析

第一段

1. **原文：**For the past several years, the Sunday newspaper supplement Parade has featured a column called "Ask Marilyn."

译文：过去几年，周日报纸增刊《游行》开设了一个名为“问问玛丽莲”的专栏。

常考单词&短语：

- supplement n. 增刊；补充物 v. 补充，增补
- feature v. 以...为特色；开设；特写 n. 特征，特点
- column n. 专栏；圆柱；列

2. **原文：**People are invited to query Marilyn vos Savant, who at age 10 had tested at a mental level of someone about 23 years old; that gave her an IQ of 228 – the highest score ever recorded.

译文：人们受邀向玛丽莲·沃斯·莎凡提问，她在10岁时测试出的智力水平相当于23岁左右的人，这让她的智商达到了228——这是有史以来有记录的最高智商分数。

常考单词&短语：

- query v. 询问；质疑 n. 疑问，询问
- mental adj. 精神的；智力的，脑力的
- IQ (Intelligence Quotient) 智商
- record v. 记录；录制 n. 记录；唱片

长难句分析：

本句为分号连接的并列复合句。前一分句中，who 引导非限制性定语从句，修饰先行词 Marilyn vos Savant，补充说明其超高智商的背景；后一分句中，破折号后的内容为 IQ of 228 的同位语，对该分数进行补充说明。

3. **原文：**IQ tests ask you to complete verbal and visual analogies, to envision paper after it has been folded and cut, and to deduce numerical sequences, among other similar tasks.

译文：智商测试要求你完成语言和视觉类比题，想象纸张被折叠裁剪后的样子，推导数字序列，以及其他类似的任务。

常考单词&短语：

- verbal adj. 语言的；口头的；动词的
- visual adj. 视觉的，视力的
- analogy n. 类比，类推；相似之处
- envision v. 想象，预想
- fold v. 折叠；对折 n. 折痕
- deduce v. 推论，推断；演绎
- numerical adj. 数字的；用数字表示的
- sequence n. 序列；顺序；连续

长难句分析：

本句主干为 **IQ tests ask you to complete..., to envision..., and to deduce...**，三个并列的不定式结构作宾语补足语，详细列举智商测试的核心任务；**after** 引导时间状语从句，修饰 **envision paper** 的动作。

4. **原文**：So it is a bit confusing when vos Savant fields such queries from the average Joe (whose IQ is 100) as, What's the difference between love and fondness? Or what is the nature of luck and coincidence?

译文：因此，当莎凡回答来自智商为100的普通人提出的诸如“爱与喜欢有什么区别？”“运气和巧合的本质是什么？”这类问题时，不免让人有些困惑。

常考单词&短语：

- confusing adj. 令人困惑的，难懂的
- field v. 处理，回应（问题、电话等）；上场参赛 n. 领域；场地
- average Joe 普通人，平常人
- fondness n. 喜爱，钟爱；偏爱
- nature n. 本质；自然；天性
- coincidence n. 巧合，巧事；同时发生

长难句分析：

本句主干为 **it is a bit confusing**，**it** 作形式主语，真正的主语是 **when** 引导的时间状语从句。从句中使用 **such...as...** 结构引出具体的问题示例；括号内 **whose** 引导定语从句，修饰 **the average Joe**，补充说明普通人的智商水平。

5. **原文**：It's not obvious how the capacity to visualize objects and to figure out numerical patterns suits one to answer questions that have eluded some of the best poets and philosophers.

译文：一个人具备想象物体形态、推导数字规律的能力，怎么就能回答那些连最优秀的诗人和哲学家都无法解答的问题，这一点很难说清。

常考单词&短语：

- capacity n. 能力；才能；容量；容积
- figure out 弄清楚；算出；理解
- pattern n. 模式；规律；图案 v. 模仿
- suit v. 适合；使适宜；满足需要 n. 套装；诉讼
- elude v. 使困惑；使达不到；避开，逃避
- philosopher n. 哲学家；思想家

长难句分析：

本句为典型的形式主语句型，主干为 **It's not obvious**，**it** 作形式主语，真正的主语是 **how** 引导的主语从句。

主语从句主干为 **the capacity...suits one to answer questions**；其中 **to visualize objects and to figure out numerical patterns** 是两个并列的不定式作后置定语，修饰 **the capacity**；**that** 引导定语从句，修饰先行词 **questions**，说明这些问题连顶尖诗人和哲学家都难以解答。

第二段

1. **原文**: Clearly, intelligence encompasses more than a score on a test.

译文: 显然, 智力包含的远不止一次测试的分数。

常考单词&短语:

- intelligence n. 智力; 智慧; 情报
- encompass v. 包含, 涵盖; 包围; 环绕
- score n. 分数; 成绩; 二十 v. 得分; 记分

2. **原文**: Just what does it mean to be smart?

译文: 到底什么才叫“聪明”?

常考单词&短语:

- smart adj. 聪明的; 机敏的; 整洁的 v. 刺痛; 懊恼

3. **原文**: How much of intelligence can be specified, and how much can we learn about it from neurology, genetics, computer science and other fields?

译文: 智力有多少可以被明确量化? 我们又能从神经学、遗传学、计算机科学和其他领域中对智力有多少了解?

常考单词&短语:

- specify v. 明确说明; 具体指定; 量化
- neurology n. 神经学; 神经病学
- genetics n. 遗传学
- field n. 领域; 场地; 田野 v. 处理

第三段

1. **原文**: The defining term of intelligence in humans still seems to be the IQ score, even though IQ tests are not given as often as they used to be.

译文: 尽管智商测试如今不像过去那样频繁使用, 但定义人类智力的标准似乎仍然是智商分数。

常考单词&短语:

- defining adj. 起决定性作用的; 定义性的
- term n. 术语; 学期; 期限; 条款
- even though 尽管; 虽然
- used to do 过去常常做某事

长难句分析:

本句为复合句, 主干为 **The defining term...still seems to be the IQ score**; **even though** 引导让步状语从句, 从句中包含 **as...as...** 比较结构, 对比智商测试在当下与过去的使用频率。

2. **原文**: The test comes primarily in two forms: the Stanford-Binet Intelligence Scale and the Wechsler Intelligence Scales (both come in adult and children's version).

译文: 该测试主要有两种形式: 斯坦福-比奈智力量表和韦氏智力量表 (两者都有成人版和儿童版)。

常考单词&短语:

- primarily adv. 主要地; 首要地; 根本上
- form n. 形式; 表格; 形态 v. 形成; 构成
- scale n. 量表; 规模; 等级; 刻度 v. 攀登; 缩放
- version n. 版本; 译本; 说法

3. **原文**: Generally costing several hundred dollars, they are usually given only by psychologists, although variations of them populate bookstores and the World Wide Web.

译文: 这类测试通常要花费数百美元, 一般只由心理学家提供, 不过市面上的书店和互联网上也充斥着各种改编版本。

常考单词&短语：

- generally adv. 通常；普遍地；一般而言
- psychologist n. 心理学家
- variation n. 变体；改编版；变化；变异
- populate v. 充斥于；居住于；构成...的人口
- the World Wide Web 互联网；万维网

长难句分析：

本句为复合句，主干为 **they are usually given only by psychologists**。句首的 **Generally costing...** 是现在分词短语作原因状语，说明测试的费用属性；**although** 引导让步状语从句，补充说明测试改编版本在市面广泛存在的情况。

4. **原文：** Superhigh scores like vos Savant's are no longer possible, because scoring is now based on a statistical population distribution among age peers, rather than simply dividing the mental age by the chronological age and multiplying by 100.

译文： 像莎凡那样的超高分如今已经不可能出现了，因为现在的计分方式是基于同龄人群的统计人口分布，而非简单地用心理年龄除以实际年龄再乘以100。

常考单词&短语：

- superhigh adj. 超高的
- scoring n. 计分；得分 v. 得分；记分
- statistical adj. 统计的；统计学的
- population distribution 人口分布；群体分布
- age peers 同龄人
- rather than 而不是
- divide v. 除以；划分；分开；分配
- chronological adj. 按时间顺序的；按年代计算的
- chronological age 实际年龄；生理年龄
- multiply v. 乘以；相乘；繁殖；增加

长难句分析：

本句为复合句，主干为 **Superhigh scores...are no longer possible**。**because** 引导原因状语从句，解释超高分无法复现的原因；从句中，**rather than** 连接两个并列的表语成分，对比新旧两种智商计分方式的核心差异。

5. **原文：** Other standardized tests, such as the Scholastic Assessment Test (SAT) and the Graduate Record Exam (GRE), capture the main aspects of IQ tests.

译文： 其他标准化测试，比如学术能力评估测试（SAT）和研究生入学考试（GRE），都具备了智商测试的主要核心特征。

常考单词&短语：

- standardized adj. 标准化的；标准规格的
- assessment n. 评估；评价；评定
- graduate n. 研究生；毕业生 adj. 研究生的；毕业的
- capture v. 体现；捕捉；俘获；捕获
- aspect n. 方面；层面；外观

第四段

1. **原文：** Such standardized tests may not assess all the important elements necessary to succeed in school and in life, argues Robert J. Sternberg.

译文： 罗伯特·J·斯滕伯格认为，这类标准化测试可能无法评估在学业和生活中取得成功所需的所有重要因素。

常考单词&短语：

- assess v. 评估；评价；评定；估算
- element n. 要素；因素；元素；成分

- necessary adj. 必要的；必需的；必然的 n. 必需品

长难句分析：

本句为宾语前置的倒装句，正常语序为 Robert J. Sternberg argues that...，此处将宾语从句内容前置，起到强调观点的作用；宾语从句中，necessary to succeed in school and in life 是形容词短语作后置定语，修饰 all the important elements。

2. **原文：** In his article “How Intelligent Is Intelligence Testing?”, Sternberg notes that traditional tests best assess analytical and verbal skills but fail to measure creativity and practical knowledge, components also critical to problem solving and life success.

译文：斯滕伯格在其《智商测试有多智能？》一文中指出，传统测试能很好地评估分析能力和语言能力，却无法衡量创造力和实践知识，而这些因素对解决问题和人生成功也至关重要。

常考单词&短语：

- analytical adj. 分析的；解析的；善于分析的
- fail to do 未能做某事；无法做某事
- measure v. 衡量；测量；估量 n. 措施；尺度；测量
- creativity n. 创造力；创造性
- practical adj. 实践的；实际的；实用的
- critical adj. 至关重要的；关键的；批评的；临界的
- problem solving 问题解决；解决问题

长难句分析：

本句为复合句，主干为 Sternberg notes that...，that 引导宾语从句。

宾语从句主干为 traditional tests best assess...but fail to measure...，but 连接两个并列谓语结构，体现传统测试的优势与局限性；句末的 components also critical to... 是同位语结构，补充说明前文的 creativity and practical knowledge，其中 critical to... 是形容词短语作后置定语，修饰 components。

3. **原文：** Moreover, IQ tests do not necessarily predict so well once populations or situations change.

译文：此外，一旦测试人群或环境发生变化，智商测试的预测效果就不一定那么理想了。

常考单词&短语：

- moreover adv. 此外；而且；再者
- necessarily adv. 必然地；必定；必要地
- predict v. 预测；预言；预知
- situation n. 情况；状况；环境；形势
- once conj. 一旦；一...就... adv. 曾经；一次

4. **原文：** Research has found that IQ predicted leadership skills when the tests were given under low-stress conditions, but under high-stress conditions, IQ was negatively correlated with leadership – that is, it predicted the opposite.

译文：研究发现，在低压力环境下进行测试时，智商能够预测领导能力；但在高压力环境下，智商与领导能力呈负相关——也就是说，它预测的结果完全相反。

常考单词&短语：

- leadership n. 领导能力；领导阶层；领导力
- stress n. 压力；强调；紧张 v. 强调；使紧张
- condition n. 条件；环境；状况 v. 调节；使适应
- negatively adv. 负面地；消极地；否定地
- correlated adj. 相关的；相互关联的
- be correlated with 与...相关
- opposite adj. 相反的；对立的 n. 对立面；反义词

长难句分析：

本句为复合句，主干为 Research has found that...，that 引导宾语从句。

宾语从句中，but 连接两个并列分句，形成强对比：前一分句中 when 引导时间状语从句，

说明低压力测试环境；后一分句补充高压力环境下的结果，破折号后的 **that is** 引导同位语，对“负相关”进行通俗解释。

5. **原文**: Anyone who has toiled through SAT will testify that test-taking skill also matters, whether it's knowing when to guess or what questions to skip.

译文: 任何熬过SAT考试的人都能证明，应试技巧也很重要，比如知道什么时候该猜答案，什么题目该跳过。

常考单词&短语:

- toil v. 辛苦劳作；艰难跋涉；煎熬 n. 辛苦；苦工
- toil through 艰难地完成；熬过
- testify v. 证明；证实；作证
- test-taking skill 应试技巧
- matter v. 要紧；有重大影响 n. 事情；问题；物质
- skip v. 跳过；略过；蹦跳着走 n. 跳跃；省略

长难句分析:

本句为复合句，主干为 **Anyone...will testify that...**。

who 引导定语从句，修饰先行词 **Anyone**，限定主体范围；**that** 引导宾语从句，作 **testify** 的宾语；句末的 **whether...or...** 引导让步状语从句，举例说明应试技巧的具体体现。

三、完整原文

For the past several years, the Sunday newspaper supplement Parade has featured a column called "Ask Marilyn." People are invited to query Marilyn vos Savant, who at age 10 had tested at a mental level of someone about 23 years old; that gave her an IQ of 228 – the highest score ever recorded. IQ tests ask you to complete verbal and visual analogies, to envision paper after it has been folded and cut, and to deduce numerical sequences, among other similar tasks. So it is a bit confusing when vos Savant fields such queries from the average Joe (whose IQ is 100) as, What's the difference between love and fondness? Or what is the nature of luck and coincidence? It's not obvious how the capacity to visualize objects and to figure out numerical patterns suits one to answer questions that have eluded some of the best poets and philosophers.

Clearly, intelligence encompasses more than a score on a test. Just what does it mean to be smart? How much of intelligence can be specified, and how much can we learn about it from neurology, genetics, computer science and other fields?

The defining term of intelligence in humans still seems to be the IQ score, even though IQ tests are not given as often as they used to be. The test comes primarily in two forms: the Stanford-Binet Intelligence Scale and the Wechsler Intelligence Scales (both come in adult and children's version). Generally costing several hundred dollars, they are usually given only by psychologists, although variations of them populate bookstores and the World Wide Web. Superhigh scores like vos Savant's are no longer possible, because scoring is now based on a statistical population distribution among age peers, rather than simply dividing the mental age by the chronological age and multiplying by 100. Other standardized tests, such as the Scholastic Assessment Test (SAT) and the Graduate Record Exam (GRE), capture the main aspects of IQ tests.

Such standardized tests may not assess all the important elements necessary to succeed in school and in life, argues Robert J. Sternberg. In his article "How Intelligent Is Intelligence Testing?", Sternberg notes that traditional tests best assess analytical and verbal skills but fail to measure creativity and practical knowledge, components also critical to problem solving and life success. Moreover, IQ tests do not necessarily predict so well once populations or situations change. Research has found that IQ predicted leadership skills when the tests were given under low-stress conditions, but under high-stress conditions, IQ was negatively correlated with

leadership – that is, it predicted the opposite. Anyone who has toiled through SAT will testify that test-taking skill also matters, whether it's knowing when to guess or what questions to skip.

四、完整译文

过去几年，周日报纸增刊《游行》开设了一个名为“问问玛丽莲”的专栏。人们受邀向玛丽莲·沃斯·莎凡提问，她在10岁时测试出的智力水平相当于23岁左右的人，这让她的智商达到了228——这是有史以来有记录的最高智商分数。智商测试要求你完成语言和视觉类比题，想象纸张被折叠裁剪后的样子，推导数字序列，以及其他类似的任务。因此，当莎凡回答来自智商为100的普通人提出的诸如“爱与喜欢有什么区别？”“运气和巧合的本质是什么？”这类问题时，不免让人有些困惑。一个人具备想象物体形态、推导数字规律的能力，怎么就能回答那些连最优秀的诗人和哲学家都无法解答的问题，这一点很难说清。

显然，智力包含的远不止一次测试的分数。到底什么才叫“聪明”？智力有多少可以被明确量化？我们又从神经学、遗传学、计算机科学和其他领域中对智力有多少了解？

尽管智商测试如今不像过去那样频繁使用，但定义人类智力的标准似乎仍然是智商分数。该测试主要有两种形式：斯坦福-比奈智力量表和韦氏智力量表（两者都有成人版和儿童版）。这类测试通常要花费数百美元，一般只由心理学家提供，不过市面上的书店和互联网上也充斥着各种改编版本。像莎凡那样的超高分如今已经不可能出现了，因为现在的计分方式是基于同龄人群的统计人口分布，而非简单地用心理年龄除以实际年龄再乘以100。其他标准化测试，比如学术能力评估测试（SAT）和研究生入学考试（GRE），都具备了智商测试的主要核心特征。

罗伯特·斯滕伯格认为，这类标准化测试可能无法评估在学业和生活中取得成功所需的所有重要因素。斯滕伯格在其《智商测试有多智能？》一文中指出，传统测试能很好地评估分析能力和语言能力，却无法衡量创造力和实践知识，而这些因素对解决问题和人生成功也至关重要。此外，一旦测试人群或环境发生变化，智商测试的预测效果就不一定那么理想了。研究发现，在低压力环境下进行测试时，智商能够预测领导能力；但在高压力环境下，智商与领导能力呈负相关——也就是说，它预测的结果完全相反。任何熬过SAT考试的人都能证明，应试技巧也很重要，比如知道什么时候该猜答案，什么题目该跳过。
